

# Tvitec

UNIQUE QUALITY AND  
EXCEPTIONAL SIZE

Tvitec will be exhibiting this year at Veteco, with its latest developments in insulating glass and large digital silk-screen printing technology. Products on show will cover Industry 4.0 aspects, of course, but also 12-metre glazing and silk-screen solutions.

**INTRODUCING THE LATEST  
IN INSULATING GLASS AND  
LARGE DIGITAL  
SILK-SCREEN PRINTING  
TECHNOLOGY**

Veteco, the International Trade Show for Window, Facade and Sun Protection Systems, will be taking place in Madrid 13-16 November.

## TVITEC

Tvitec is a young company with strong roots in the glass industry. Founded in 2007, the company has always had an entrepreneurial spirit and great ambition, powered by a highly skilled team with considerable experience in the sector. Tvitec offers solutions and products for both small- and medium installers, as well as for major works. The company's main production facility is located in Cubillos del Sil (León), near Ponferrada, where it has a factory of more than 85,000 square metres, the largest in Europe.

And this year's event will be the perfect opportunity for Tvitec to introduce its most recent developments regarding insulating glass and digital silk-screen printing technology.

Tvitec, the main architectural glass transformer in Spain, will, in fact, take advantage of Veteco 2018 to introduce the potential behind its latest technology for manufacturing unique glazing products on the global market – unique for their quality and also because of their exceptional size.

### IG SOLUTIONS

Tvitec will take its insulating glass solutions measuring 12 x 3 metres in length to Veteco, which practically only the company headquarters in Cubillos del Sil (León) can produce at European level thanks to its new Bystronic large format double glazing line. Visitors at the trade show will have the chance to see in situ how these solutions not only contribute to building eco-efficiently but also maximise natural light, and highlight the exclusivity of projects, as can be already be seen in the capital of Spain itself, in the new Real Madrid offices, at the Uría Menéndez law firm headquarters for or in the luxury community Lagasca 99.

### INDUSTRY 4.0

Tvitec's 4.0 technology capacity will also be on show

at Veteco in its digital silk-screen products. Tvitec is equipped to manufacture 12-metre glazing and silk-screen solutions in a fast an efficient way, directly linked to its new Vitro Jet F Type line from Fenzi Tecglass. This machine allows for digital silk-screen pieces to be processed at a speed of 440 metres/hour, reproducing images or compositions on fronts or insides with an infinite range of high-precision patterns and special effects.
