Fast. A new generation.

Some say, it is a milestone in insulating glass manufacturing.
Others say, it is the Formula 1 of triple I.G. production.
So what do you think you will say? Quality, technical standards,
flexibility and reliability are always associated with the cycle time.
Those who are efficient and fast will close the deal.
Be inspired by our new **speed'line**.

DOUBLE EDGING MACHINES

Glass is very fragile, yet the machinery for handling glass must be extremely rugged...carefully and deliberately engineered with working muscle to spare.

Glass working machinery is subject to a constant spray of water and grit, yet it must deliver reliable power and precision and be designed for dependable around-the-clock operation.

You can afford to break a piece of glass but you can't afford machinery breakdown.

Besana Machinery delivers on all these counts...and does it with muscle to spare.

Share our pride

Optima started making its history of success **20 years ago**, by introducing creativity and the force of technology in the flat glass software sector.

Our company has been founded on two key words: **vitality and innovation**. In twenty years of business we have done much to improve the quality of the product we offer.

20 years is an important milestone and a reason to feel proud, for which we would like to thank all the people who we have had the pleasure to meet and work with during this long period of time: clients, suppliers, collaborators, salesmen and institutions.

These are people we have always learned something from and with their knowledge have contributed to our ideas and have helped us to make them become solid projects. These are the people that have participated and contributed to make our dream come true.

Thank you all from the bottom of our heart.

A woman with long brown hair, wearing a light blue button-down shirt, is shown from the side, focused on shaping a piece of clay on a pottery wheel. The wheel is mounted on a wooden base and has the text '9R40' and '1113PD' printed on it. The background is a dark, textured surface covered with various finished ceramic wheels of different sizes and colors, including white, light blue, and terracotta. Some of the wheels have text like '10S40' and '1013PD' printed on them. The lighting is warm and focused on the woman's hands and the wheel she is working on.

COMPANY PROFILE

Adelio Lattuada produces the widest range of edging and bevelling machines currently on the market:

- more than 30 models of electronic or with PC straight-line edging machines for flat edges with arris and variable angle from 5 to 16 wheels;
- complete line of double-edgers from 8 to 12 wheels on each side, for flat edges with arris, available with many different possible configurations, both as stand-alone and in-line versions;
- more than 10 models of electronic or with PC straight-line bevelling machines from 7 to 14 wheels;
- 2 models of combined straight-line edging/bevelling machines (electronic or with PC) for the simultaneous processing of flat edges with arris and bevels in one single passage;
- 4 models of automatic corner grinding machines, able to process radius and straight corners of up to 20mm glass thickness in less than 30 seconds;
- 10 models of vertical washing machines both open or closed on top;
- accessories: a small washing machine that can be fitted on all Adelio Lattuada edging and bevelling machines' outlet conveyor.

The strong points of all products are their ease of use, long working life, very simple to use, low maintenance required and high processing quality. The company is also highly concentrated on the customization of all its models in order to adapt them to different customers' demands: a very wide and detailed list of options is available, and is continuously updated and increased in response to the evolving market.

COMPANY PROFILE

PVB Shaping, relaxation and Cutting

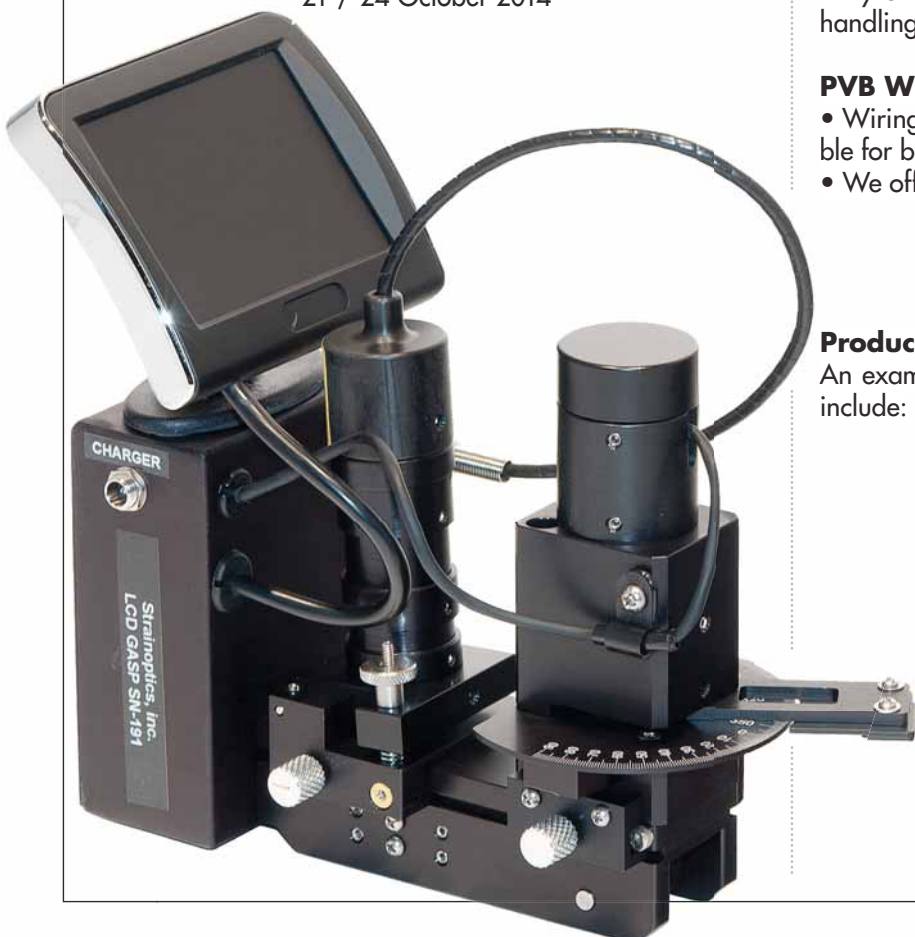

- **Ayrox** has a long history as a specialist in PVB treatment, from roll handling to cut sheets ready for lamination. This includes roll transfer, shaping, relaxation and cutting.
- The advantage of PVB shaping and stretching is that it generates considerable material savings for laminated wind-screen producers.
- Ayrox newest product is an innovation in wedged PVB roll handling and cutting.

PVB Wiring

- Wiring technology enables to produce heatable PVB, suitable for both architectural and automotive applications.
- We offer accessories for PVB wiring:
 - Wolfram by Ayrox™ tungsten wire can be used in all heatable laminated glass applications
 - Busbars made from tin-coated copper.

Production Accessories

An example of production accessories in our product range include:

- For lamination:
 - Silicon rubber vacuum rings
 - Special silicone-free non-EPDM vacuum rings. These vacuum rings leave no silicone residue on glass and last tens times longer than normal silicone-free EPDM vacuum rings.
- For tempering, we supply aramide fiber tapes of different sizes and thicknesses.

Optical quality control

- Ayrox provides a wide range of high-precision non-destructive optical measurement instruments. They are designed for Quality Control requirements and worldwide norms and regulations. Our product range also includes optical equipment such as:
 - Polariscope for visual inspection of stresses in glass
 - Polarimeters for a quantitative evaluation
 - GASP for surface stress measurement
 - VRP for non-destructive residual stress measurement on black paint areas
 - Edge stress metres, etc.
- Surface stress (mechanical strength) gauges for annealed, tempered and heat strengthened glass

- Our qualified technicians perform annual calibrations, repairs and preventive maintenance, and are available for theoretical and practical trainings.

Heatable backlite soldering and testing

- We offer machinery to perform testing of:
 - electric circuits
 - continuity of lines
 - mechanical strength of soldering
- Our soldering range includes:
 - Manual, semi-automatic and custom automated soldering machines, with a positioning jig.

Ayrox continuously innovates and expands its product range and machinery, responding to special production needs.

PRODUCT RANGE

- PVB shaping, relaxation and cutting lines
- Heatable PVB wiring technologies
- Heatable backlite soldering and testing systems
- Silk printing machinery
- Flat and bent glass tempering machinery
- Sourcing and trading in safety glass for various applications
- Distributor of Strainoptics products

COMPANY PROFILE

Bovone Diamond Tools srl (BDT), founded in 2003, has, as one of its main products, resin diamond wheels, also thanks to being part of the Elettromeccanica Bovone group, a historically-important brand in the sector of bevellers and flat-edge straight-line edgers for flat glass.

At present, the production of BDT includes metal- and resin alloy diamond wheels for all types of bevellers, straight line edgers, work centres, original wheels for Bovone machines, special wheels 'made to measure' and diamond drill bits.

Moreover, the company also commercializes polishing wheels, felts, cerium oxide, cooling oil, pumice stone tablets and carborundum.

Right from the very beginning of its activities, Bovone Diamond Tools has focussed intensely on R&D to develop ever-more performing solutions with regards to long working life and quality of the end products, so as to favour higher efficiency in glassworks by lowering labour costs.

One of the most important innovations is GOLDNET, a milling cutter that already differs from the previous version in its design as it has numerous small sections that intersect instead of the usual lengthwise sections of normal cutters.

GOLDNET has been patented and put onto the market after a long series of tests, and is an innovative solution that enables to obtain higher processing quality, as well as longer working life of the tool, which can be easily used on any type of glass. The higher cost of this item is compensated greatly by its performance.

BDT's production not only regards products in series and, in fact, the company is also open to respond to the diverse needs and demands of its clients, with the most recent developments being focussed on tools that are not exclusive for Elettromeccanica Bovone machinery.

The company has also increase its machine fleet in preparation for the start up of the new production of diamond tools for stone requested by BDT's distributors.

And due to the increasing demand of quality products from Latin America, Bovone Brasil, located in San Paulo, was opened in 2010, aimed at facilitating the market penetration of grinding wheels and drill bits.

At present, exports of BDT are more than 70% of the company's production, with the main market being the US, while in Europe, the most important markets are Germany and Spain, followed by the UK. Belgium is growing and Scandinavia is increasing its demand. And exports in Russia and Ukraine are now picking up again thanks to the collaboration with a new agent.

In conclusion: constant high quality of products and client satisfaction, while continuously updating machinery and constantly investing in R&D, this is the winning formula of Bovone Diamond Tools.

COMPANY PROFILE

Future-oriented systems for glass processing

Bystronic glass symbolizes innovation with machinery, systems and services for the processing of architectural and automotive glass focussed on tomorrow's market. From basic requirements through to entire, customized installations Bystronic glass provides pioneering solutions – naturally, all in the highest quality.

Bystronic glass is an international brand with globally operating companies that support their customers on site and through own sales and service companies. Since 1994, Bystronic glass is part of the Conzeta AG, a renowned Swiss industrial holding company.

Insulating glass manufacturing

Irrespective of whether a fully-automatic line for insulating glass production with warm-edge spacers or an entry-level solution: at Bystronic glass, each and every insulating glass manufacturer will find the line or machine that meets their requirements. The benchmark in this sector is the modern speed'line production line, which can be used to produce triple insulating glass units in the same time it takes other lines to produce double units. On the other side of the product range is the comfort'line, the ideal entry-level solution to industrial insulating glass production.

Laminated glass manufacturing

The eco'lamline manufactures all versions of laminated glass in an energy-efficient manner – from simple constructions through to complex shaped formats with special films – all on a single system. The eco'convect, the pre-nip that is proven and continues to be revolutionary enables a homogeneous heat input that is obvious in the quality of the end product as

it is crystal clear. The convection system also ensures homogeneous heating in the pre-nip, even enabling the rational lamination of highly reflective, coated glasses.

Handling equipment

The best seller Easy-Lift has been impressing customers from the glass processing industry with its rigid guidance and its own low dead weight since 1998. In recent years, the handling equipment has also gradually asserted itself with large window manufacturers as it is extremely flexible in terms of frame design and therefore fulfils their requirements. Track-mounted equipment as well as battery-powered suction frames complete the range.

Automotive glass pre-processing

A few years ago, Bystronic glass introduced a completely new machine generation for the pre-processing of automotive glass onto the market in the form of the champ'speed. In the meantime, the champ'speed 2in1 version, the first machine in the world that can break automotive glass with or without a template on a single machine has established itself. Customers gain both functions in one cell and can flexibly switch between breaking with or without a template.

PRODUCT RANGE

Straight edgers grinders

Double edgers grinders

Vertical drills

Horizontal drills

COMPANY PROFILE

C.M.B. Besana machines are continuously updated with technological and electronic innovations, able to guarantee high precision, reduced set-up time and increased production.

The most recent innovations are those regarding Double Edger Grinders for extra-polished flat edges and those for pencil edges, and the new series of NC drills in two versions: vertical compact with two pairs of drill spindles, and horizontal with five pairs of drill spindles and a router for the milling

and grinding of notches. Vertical drills are particularly suitable for automatic grinding and drilling lines combined with SF-type automatic seaming machines. CMB's series of drills also includes a new, highly versatile semi-automatic machine.

Straight line edgers for flat edges and polished arises or variable angle mitre, are available for up to 60° on thicknesses up to 40mm for both normal and laminated glass, as well as with 13 or 15 spindles for processing large thicknesses up to 65mm and more. A smaller model for glass thickness of 20mm and mitre up to 50° is also available.

COMPANY PROFILE

Cugher was founded in the late 1960s. It was one of the first companies to automate the silk screen printing process and is now recognized as one of the most innovative and technologically advanced producers of silk screen printing machines and solutions worldwide, leader in the Automotive sector.

Turnkey projects

The company is specialized in the realization of turnkey silk screen printing lines, providing a wide range of optional and complementary equipment and solutions even for the most challenging production needs.

Our clients are testimonials for our reliability and quality, among which, leading glass manufactures such as AGC, Guardian, Pilkington, PGW, Saint-Gobain, Schott, Sisecam.

Fully automatic machines

Cugher offers two technologically advanced types of printers: Series G and Series J. Series G printers are the best solution for industrial contests that require high automation, large production volumes, quick set up and format changeover and extreme print precision, absolute leader in automotive glass printing, as well as the special edition Series G for double glass printing.

Series J printers are the answer for handling large formats, drilled, heavy glass, for medium – high production; the modular machine design provides flexibility, accessibility, easy set up and maintenance, the best applications in Architecture and Glass door manufacturing.

Semi-automatic machines

Series LS and Canguro are Cugher's machines for medium and special production needs.

Series LS has a maximum printing size of up to 130x70cm, a wide range of applications, and can be personalized for particular types of production.

Ease of use and maintenance, Series LS occupies a small space, has print precision of +/- 0,08mm, and can be equipped with automatic unloading.

Series Canguro, maximum printing size up to 20x50cm, very easy to use, small and compact, completely pneumatic, manual set up and loading/unloading, flexibility of production.

IR and UV Dryers

Cugher dryers comply with the highest industry standards, and can be used both stand alone and integrated in a silk screen printing line.

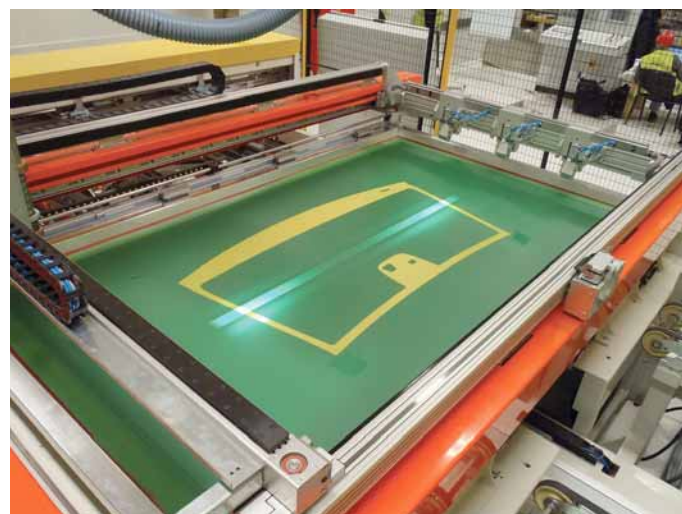

Our dryers are manufactured with the best existing materials and components, in order to guarantee maximum reliability and productivity.

The IR Dryers use medium wave length, mixed type drying technology (IR light and hot air), Kevlar belt transport system under constant tension, automatic power management, which guarantee quick and uniform drying.

The UV Dryers have compact dimensions and guarantee safe operation and complete UV protection. Power saving thanks to a fully digital control system, exit temperature of the glass slightly above that of the environment.

Complementary equipment

- Edge-to-Edge glass quality control systems
- Automatic screen alignment
- Stackers
- Screen integrity control systems
- Rotating tables
- Tilting conveyors
- Chiller units

FORVET SRL

Str. Piossasco, 46 - 10040 Volvera (TO) - Italy
Tel: +39 - 011 - 9855200 r.a. • Fax: +39 - 011 - 9853032
e-mail: forvet@tin.it • www.forvet.it

COMPANY PROFILE

Forvet's wealth of experience has enabled the company to develop innovative solutions for specialised glass working machinery. Since 1990 the market sector has been explored in all aspects in order to improve the performance of the equipment. The continuous effort has led the company to develop cutting edge technology which is setting the standard in this market. Located in Volvera (near Turin), the company is ideally positioned to benefit technologically from the highly developed Automotive and Aviation/Aerospace industries in North Western Italy. These factors have enabled Forvet to produce highly sophisticated, technically advanced and durable machinery.

FRANCESCA and CHIARA lines

"The combination of the **FRANCESCA FC** work centres in line with the **CHIARA MTP** edge processor offers the user unique production power combined with unrepeatable performance flexibility.

These machines linked together are the combination of two different processes that can operate different glass thickness and different glass sizes in automatic operations without the need for any manual adjustments.

The lines, depending on machine model, can grind or polish flat and aris rectangular glass and **GEOMETRICAL SHAPES** and can drill, countersink and mill on straight or shaped glass.

Francesca FC 32M 3300 Work Centres

Francesca FC 32M 3300 is a new idea of flexibility, created for large industrial companies with important production volumes, also with regard to limited batch quantities. Support during transport and stabilization during proces-

sing, obtained thanks to a new Forvet patented transport system, are based on dynamic vacuum, which maintains the glass in its correct position during movement along its entire length.

This special feature enables to process low-E magnetron glass without contact with and damaging the glass surface. Francesca FC 32M 3300 is the only work centre that enables to carry out milling and drilling on an automatic line thanks to its completely automatic loading, positioning, re-setting and unloading.

The plant is equipped with 32 tools, on four processing heads, enabling to use four different tools on the same sheet of glass at the same time, and drastically reducing processing times.

Francesca FC 16M 1600 Work Centres

The experience gained with the Francesca 32M 3300 over the years has resulting in a new machine of this range which, even if more compact, uses the same principles and patents of its 'bigger sister'.

This latest technological effort of the company has also taken into consideration the logistics aspects connected to the installation of the machine - taking up only five hours.

The working dimensions of the machine enable to process glass sizes of up 3500 x 2000mm, and 300Kg in weight. This new machine is the perfect example of flexibility, aimed at medium-sized companies with limited production quantities and series.

Waterjet cutting applications

The **FRANCESCA** range of machines has undergone a technological restyling that has enabled to include water jet

technology for glass cutting.

Francesca FC 16M 1600 and FC 32M 3300 can be equipped with one or more nozzles for the cutting of glass using high-pressure jets of water.

This technology, already well known in the glass sector, has been used by Forvet following its company philosophy, resulting in the first waterjet cutting machine with loading, positioning, processing and unloading all carried out completely automatically.

This has made waterjet technology much more accessible for users, as it has eliminated all problems connected to the management of waterjet cutting, such as loading, positioning and unloading.

Francesca FC 16M 1250 HO Work Centres

Robustness, reliability and performance. These are the characteristics that make Francesca FC 16M 1250 HO the best-selling machine with regards to problems connected to automation of milling and drilling, with automatic loading and unloading.

Its sturdy construction ensures an average working life of 15-20 years, reliability that guarantees three production shifts without problems, with an average of four minutes to carry out notches and holes during the production of doors.

This highly successful machine, one of the first manufactured by Forvet, has a list of references that justifies the company's choice of keeping it in production, with updates regarding mechanical aspects, side by side with the most recent technological choices.

Chiara MTP8 Modular

This machine is yet another revolution in the grinding sector. The new CHIARA MPT8 MODULAR carried out polished grinding of all edges of glass, also those out-of-square. Chiara MPT8 MODULAR can process four or more edges of glass sheets at the same time or in sequence. (patented system) The machine can process different glass thicknesses, sizes and shapes continuously, without the need for manual intervention.

The complete control of each single action that the machine carries out, enables to grind glass thicknesses of 3mm and sizes of 300x400mm, and immediately followed by glass thickness of 15mm and sizes of up to 3300x6000mm.

CHIARA MPT8 MODULAR can process each side of the same glass sheet with different edge finishes. The operator can choose the type of finish by simply changing parameters on the keyboard.

During production, the glass is supported by a particular configuration of the automatic vacuum system, with NC controlled suction cups as per the different glass sizes (patented system)

which means that CHIARA MODULAR is the only grinder that guarantees the processing of low-E glass without touching the glass surface, whatever type of coating it has.

The Key

The constant analyses of problems connected to glass processing has always been a priority for Forvet. As a consequence, the optimization of production performance obtained with Forvet machines has become a real necessity.

The use of integrated technology and company goal have created the production line made up of Chiara and Francesca. These production lines can also be supplied with different thicknesses and sizes making raw material supply complex.

To solve this problem, and also to increase production by means of the reduction of handling of the glass, and the application of 'just in time' supply of material, Forvet has created KEY. KEY is a system to supply the starting material in the thicknesses, shapes and sizes requested, starting from the warehouse of glass sheets. Each 'starting' sheet can be different from the previous and following one, thus responding to the production needs programmed on the CHIARA-FRANCESCA line.

The system is made up of an automatic warehouse of the glass sheets in which a robot chooses the raw material. The glass is transported towards the cutting and breakout bar where a second robot handles and measures the position and requested inclination to obtain the shapes requested.

COMPANY PROFILE

FORZA G® revolutionizes fluid filtration and separation in applications requiring clarified process fluid. Unique design and efficiency features, as well as reduction and optimization of power using inverter motors are the key to a superior system that saves money and increases bottom line profits by offering benefits that include: increased production; superior quality; extended fluid life; reduced waste volume; media free filtration; fully automatic, unattended operation; maintenance free; extended life of tools and wheels; extend life of process machinery.

Since 1998, **FORZA G®** has been an innovator in environmental products and fluid management services. With its two-step centrifugation technology it has proven results in the most demanding situations throughout a wide range of industrial, commercial and institutional applications.

The newest designs, developed thanks to the collaboration with and information of clients, has been successfully proven in the most demanding applications, with over 380 installations in 38 countries throughout the world.

No other centrifuge machine matches **FORZA G®** for durability, reliability, performance and workmanship. **FORZA G's** superiority has been proven in the most demanding applications, such as glass grinding, stone grinding, ceramic grinding, machining coolants, paint booth curtain water, zinc iron phosphate baths, in hundreds of installations in countries throughout the world.

COMPANY PROFILE

FRATELLI PEZZA was founded in 1970 and started its activities as a manufacturer of industrial plants and machinery, soon focussing on the glass machinery sector. The company represents leading edge technology in the manufacture of glass sandblasting plants, thanks to the creativity and technical skill of its founder Alessandro Pezza, the person who actually invented the fully automatic sandblaster for flat glass.

The company constantly concentrates on R&D, looking for innovative solutions from both the technical and functional point of view. These efforts have resulted in the newest version of the

Mistral series, the Mistral EVOLUTION. This model, available in three versions (M120EV, M180EV and M260EV), is equipped with a new colour screen and programming is extremely quick and intuitive thanks to the use of graphic images and icons. The Mistral EV allows to carry out normal, light, engraved and SHADING sandblasting, zonal blasting (50 areas). It also enables to create and store up to 50 customized working programmes in the memory bank.

FRATELLI PEZZA's product range also includes a more basic automatic sandblasting cabin, the ZEPHIR series, a low-cost equipment available in two versions (Z120 and Z180), that allows to carry out normal, light and engraved sandblasting. Beside automatic machines, the company still manufactures a couple of manual sandblasting cabins, the GHIBLI series, and the portable units SANDER FP101 (portable sandblaster) and MARKER 101 (sand-jet marking machines for logo engraving).

The product range is completed with spares and consumables, such as aluminium oxide extra quality and the surface protector for glass MIX 30, which are always available ex-stock. Taking advantage of its recently renewed headquarters which allow the company to reach high efficiency levels, FRATELLI PEZZA remains the world's leading manufacturer of sandblasting equipment for flat glass and boasts prestigious references worldwide.

Hiyon V10 - vertical straight line mitring machine with 10 spindles

GlastonAir

Changing the way the world sees glass and develops glass processing technology, machines and services for architectural, solar, appliance and automotive applications. Our portfolio ranges from pre-processing and safety glass machines to tools and services. We serve customers worldwide from over 20 locations and with production in four countries on three continents: Italy, Brazil, China and Finland.

Customers trust in our strong technological expertise, equipment quality, advanced product and service offering, comprehensive customer service network as well as productive and energy-efficient machines. They know they can get everything they need from us for cutting and drilling to edge grinding and polishing, including tempering, bending, bent tempering and lamination. Our portfolio brings you the most extensive high-quality range of glass pre-processing and safety glass processing machinery and services.

We have delivered over 25,000 glass pre-processing machines to more than 100 countries for the past 65+ years. Our wide product range includes diamond and polishing tools, CNC machines and technologies for cutting, edging, beveling and drilling machines, available as stand-alone solutions as well as in integrated lines. Moreover, we have delivered close to 3,000 safety glass machines to over 90 countries for 40+ years with technology for flat glass tempering, glass bending and tempering, glass bending and flat glass laminating. The competitive edge of our machines is the reliability of operations, flexible capacity, energy efficiency, and high end product quality.

Glaston technology takes you the next step ahead

Glaston Hiyon™ is the new series of Glaston straight-line edgers with a patented double driven conveyor, ingenious GRIND&STOP function, energy savings, and much more.

Glaston XtraEdge™ is our latest range of double edging machines with cup wheels, bringing customers "Xtra" productivity and quality in flat edge glass processing with arrises and corner cutting.

Glaston UC™ Series, a new range of automatic cutting lines, delivers outstanding performance and reliability at an affordable price. Coupled with a new generation fast and versatile range of loaders and of proven break-out tables, the UC series is well suited for the most demanding cutting applications.

Glaston RC200™, RC350™ and FC500™ flat tempering lines meet today's heavily competed tempering business with

high production capacity, a wide glass application capability and low operating costs due to minimized energy use.

GlastonAir™ gives you a new approach to glass heat treatment with its unique air flotation technology for quality and processing results that are impossible to reach with roller-type tempering furnaces.

Glaston IriControl™ is a unique measurement system and special technology to overcome iridescence. It raises the quality of tempered glass to a level that will be indisputably demanded in the near future.

Glaston iLook™ is an integrated online glass quality measuring system that measures roller wave and edge kink, both leading and trailing, measuring glass online without any human error and saving you time.

Glaston Services for a highly productive lifetime

As the leader in the industry when raising the bar for all types of glass processing, Glaston is now setting a new standard of service and support called Glaston Genuine Care. The name for this concept comes thanks to our genuine breakthroughs in glass processing R&D, our genuine spare parts and tools – and especially because of our genuine interest in our customers' long-term business success. Glaston Genuine Care helps you extend the lifetime of your glass processing machinery and take your business to a completely new level. It allows you to focus on your core competencies and leave the operational support to us to improve step-by-step on your behalf. Glaston Genuine Care includes all of our lifecycle services, training and consulting, wear and tear parts, machinery and software upgrades as well as service support.

Glaston **spare parts** are a quality guarantee for your reliable production. Our parts are all original or OEM parts, fully tested and approved by the manufacturer. Our widest range of OEM **diamond and polishing tools** available work in perfect synergy with Glaston pre-processing equipment and with other suppliers' machines.

Glaston **upgrades** are a cost-efficient way of lengthening the lifecycle of your existing process machinery and improving your overall profitability. **GlastonMove™** is a complete range of relocation services to make the move as easy as possible for both the equipment buyer and seller. We offer four different levels of **Glaston Care™ service agreements** to best match your needs and bring you world-class professional expertise on which you can fully rely. We can also customize a range of professional operator **training programs** so that your personnel get the most from the new. Let us show you how to achieve your performance goals with energy savings, quality control and convection upgrades, for windshield production, flat laminating or any of your glass processing needs.

COMPANY PROFILE

Loading

For loading **HEGLA** offers different solutions such as Automatic Floor Loading Systems, Compact and Gantry Loaders. Alongside security aspects for operators, this equipment is suitable to increase output and expand the possibilities of using special glass types. Double sided floor loaders of 3 x 2 metres and 6 x 3 metres are available with up to 6 positions (12 racks), while the gantry systems are infinitely variable and can use 'A' and 'L' frames as well as compact storage systems. 6 x 3-metre gantry loaders can also load directly from Float Liner delivery racks dropped in the crane area. **HEGLA Compact Loader**: With its compact design the Compact Loader can realise increased levels of storage capacity

Float Glass Cutting

With its wide range of cutting systems, **HEGLA** offers a perfect solution for each and every customer needs. For the industrial volume cutting of float glass for example the **Galactic** with its shortest processing time and full automation was invented. As universal cutting machine for float the **RAPIDINE** with its optional grinding device for low-E is offered.

Cutting machine for float glass: **Hepla Galactic**

Laminated Glass Cutting

For the cutting of laminated glass **HEGLA** became known with its ProLam series which cuts precise as well as quickly. To offer customers more flexibility **HEGLA** offers the ProLam Kombi which can cut even float glass and laminated glass. In 2012, **HEGLA** invented the ProLam Plus Shape with electro-magnetic linear drives which offers the possibilities of straight cuts as well as free forms and models of laminated glass. **HEGLA** peripherals equipment such as automatic edge coating removal, or the coat removal module for foil-protected glass extend the systems' range of applications and meet all requirements for professional cutting solutions.

ProLam Plus Shape: Model cutting system for laminated glass

ReMaster

The ReMaster System for optimised processing of remnant sheets was first presented at the glasstec trade fair in 2002 and has been constantly improved since then. This innovative system allows sub-plates of any type to be stored without manual handling above the cutting line. Without interrupting the production process the remnant can be used for following glass runs, thus reducing sub plate waste drastically. This creates the basis for efficient production of IG-units of all glass types and thicknesses. It offers optimal utilization of sub-plates, decreases material costs and reduces unnecessary handling.

SortJet

With the need for more and more automation and high-speed operations in glassworks, HEGLA invented the SortJet. Since its first

HEGLA SortJet: Invented to reduce material costs and improve production flow

presentation at glasstec 2004, the SortJet has proved in practice to be an innovative product that not only improves material flow but also reduces material costs to a minimum. After cutting the glass in chaotic order to reduce the offcut, all panes are stored in the dynamic buffer of the SortJet. Just 250 bays can accommodate multiple panes to buffer all the glasses in the production process for an insulation glass line.

When the panes for an IG-unit are required on the Line the individual panes are handed over directly in production orientation and sequence. The separate processes in front of and behind the dynamic buffer contribute towards a production process that significantly reduces downtime while at the same time accelerating the material flow and reducing cutting costs.

COMPANY PROFILE

Helios Italquartz Srl has been manufacturing quartz equipment such as ultraviolet lamps, infrared emitters and production machinery for over 70 years. The company's products are utilized for a wide range of applications in various industrial sectors.

The Helios Italquartz product range, specific for the glass industry, includes:

- Quartz Infrared Heaters: short- and medium-wave, mono- and twin-tube, with or without gold-coated reflectors. IR medium wave twin-tube emitters;
 - for laminating lines (plastic film coupling);
 - for mirroring lines;
 - dry screen printing lines; IR medium wave single tube emitters;
 - bending furnaces;
 - fusion furnace; IR fast medium wave twin tube emitters;
 - laminated glass cutting machines;
- UV Polymerization Equipment: UV high and medium pressure lamps for enamelling, drying screen printing of UV reactive inks, paints, coatings and adhesives for the decorating and furnishing sector;
- Manwood 25-N: UV black light apparatus, able to identify the tinned coated side of the float glass even under high brightness conditions. Such identification is very important prior to laminating, mirroring, printing and decorating processes;
- Automatic Tin-Detector: the technological development of the Manwood 25-N. It can be fixed directly on the glass transportation line, before the process starts, in order to check each and every piece of glass.

Thanks to simplicity of installation and great flexibility, it is suitable for mass manufacturing where methodological control is essential to support the rate of production.

COMPANY PROFILE

Intermac is the division of the Biesse Group specialized in the production and distribution of machines and systems for the working of flat glass and more in general for the sectors of furniture, automotive and building.

Founded in 1987, thanks to the idea to introduce in the glass sector all the experience and technology already developed for the wood working sector, Intremac

has been a powerful engine behind the innovation in this industrial segment, becoming in brief the synonym for centres for the working of glass. The very first line of machinery already made possible new processes, that immediately caught the attention of designers and architects, thus creating new markets. The high technological level of the products, built with the most advanced components and with a winning building philosophy, have enabled Intermac to conquer a leading position in this sector worldwide.

COMPANY DATA

Italcarelli® is a world leader in the design and construction of special machines and solutions for the storage and handling of flat glass. Located in Vicenza, in North-East Italy, it has a technologically advanced plant and highly trained employees specialized in the design and construction of its machines. Along many years of experience on the field, the company has acquired a remarkable knowledge of the glass sector and, thanks to investments in the research of innovative solutions, the company is providing its own products to all the most important glass manufacturing companies all over the world. Range of products:

- Platform glass transporters
- In-loader glass transporters
- Multi-directional side-loaders
- Special equipments for glass handling
- Trucks to handle packed glass inside closed top container

COMPANY PROFILE

Thanks to research, development and experience gained over the years, **Italmatic** is a manufacturer of new generation autoclaves, suitable to process any type of glass (float, tempered, low-E, translucent, etc.) both with PVB and EVA. These autoclaves can stratify and then carry out HST testing (Heat Soak Test) with completely automatic cycles. Thanks to thermal insulation solutions (insulation with nano-technologic materials) and high-performance control systems, these machines provide up to 70% energy saving compared to standard autoclaves now on the market. At the company's production sites, it manufactures autoclaves with diameters sizes from 1 meter up to 5 meters, with lengths of up to 20 meters and more. The raw materials employed, the manufacturing procedures involved, tests and continuous monitoring of manufacturing activities, guarantee customers the best quality and complete safety in use of the plants supplied. Italmatic's young and dynamic staff can assist customers in each and every phase of their project (sales, production, start-up); also providing after-sale service with on-line remote-assistance, telephone assistance service, and, last but not least, maintenance contracts to keep the whole plant efficient at all times. Italmatic also manufactures complete turnkey plants with all necessary accessories such as loading/unloading trolleys, automated loading systems, pressurization and cooling plants and more.

COMPANY PROFILE

Lanzetta Aldo srl has been operative since 1955. It is one of the few companies of the sector with all production carried out in-house: technical designs, printing projects, own bonding material, material information and control. Thanks to Lanzetta Aldo's considerable knowledge of grinding, drilling, countersinking, engraving, edging, bevelling, and also its flexibility and customer service, the company is able to guarantee the best delivery times and effective solutions for glass, mirror, laminated and ceramic glass materials.

COMPANY PROFILE

The TC9501 furnace from **LEMA S.r.l.** has been created for the chemical tempering of glass sheets measuring up to 3,200 x 2,500mm. This new machine, result of the long experience of the leading Parma-based company, which has been active in the small- and medium-sized plant sector since 1970, meets the needs of an increasing market and is particularly suitable for:

- thin glass (from 0.3mm);
- printed glass;
- glass with complex shapes (i.e. in glass furniture);
- glass for which optical quality is important;
- diverse glass thicknesses.

Chemically tempered glass is known to be at least two and a half times stronger than traditionally tempered glass, five times stronger than normal glass and can be ground, drilled and cut without any risk of breakage.

The TC9501 is flexible, easy to operate, and features a fully automatic tempering cycle.

COMPANY PROFILE

As one of the world leaders in thin film technology, **Leybold Optics** develops and manufactures vacuum deposition equipment for a broad range of applications. Originally, the foundation for the firm's present-day success was laid by inventors Ernst Leybold and Wilhelm Carl Heraeus 160 years ago. Today, Leybold Optics is a globally active high-tech company, with main facilities in Alzenau, Beijing and Cary, and over 300 employees worldwide. Its portfolio includes deposition systems for the architectural glass industry as well as for the automotive, (flexible) electronics, packaging industry, ophthalmic and precision optics industry. As a pioneer in the glass industry, Leybold Optics succeeded with break-through innovations such as the largest Vertical Glass Coater ever built and one of the fastest Off-line Glass Coaters built with a Cycle time below 28 sec. In recent years, Leybold Optics installed more than 15 Off-line Glass Coaters such as the new generation APOLLON. The APOLLON portfolio is most flexible for the glass industry in terms of size, thickness and annual throughput as well as technologies, such as Low-E, Solar Control, Anti-reflection, Conductive Layers, Electrical Function Layers, and many more.

Leybold Optics is now a part of Bühler

Bühler is a specialist and technology partner for plants, equipment, and services for processing basic foods and for manufacturing advanced materials. With its expertise and over 150 years of experience, Bühler time and again rolls out unique and innovative solutions for its customers, helping them achieve success in the marketplace. Over the decades, Bühler has come to be acknowledged as a reliable partner, thanks to its distinct commitment to quality and its global presence. Bühler Group operates in over 140 countries, has a global payroll of over 10,000 and generated sales revenues of CHF 2,322 million in fiscal 2013.

The global presence of the family-owned Bühler Group further strengthens Leybold Optics' position worldwide as a reliable supplier for thin film coating equipment. The bundling of the competencies of Bühler and Leybold Optics creates a large pool of expertise and experience that can be utilized for developing innovative customer solutions.

COMPANY PROFILE

Based in Hausmening/Austria, **LiSEC** is a global group with more than 50 years of experience, offering innovative single and all-in-one solutions in the field of flat glass processing and finishing. The group's portfolio includes machinery, automation solutions and services. In 2013, with around 1,600 employees in 30 locations and an export rate of more than 90 per cent, LiSEC generated a total turnover of about EUR 200 million. LiSEC develops and manufactures glass cutting and sorting systems, single components and production lines for insulating and laminated glass production, glass edge processing machinery and tempering systems. With reliable technologies and intelligent automation solutions, LiSEC sets standards in quality and engineering, and significantly contributes to its customers' success.

COMPANY PROFILE

ATS Eco Convection is **Mappi International**'s new horizontal glass tempering furnace using advanced technology, guaranteeing excellent production and quality results thanks to a wide range of innovative solutions for high production quantities, maximum product quality, energy savings.

All high-tech solutions are perfectly integrated in this new ATS plant, which, thanks to a new and exclusive Total Convection System, enables to temper all types of coated glass on today's market, selective glazing, solar control, as well as low-E

magnetronic glass with emissivity index of 0.01, also enabling to increase the quality of the glass and the productivity of the plant. These plants also have an opening at the side of the heating chamber, which facilitates complete access to internal components.

LAMINA 3 P 1800 3200 is a laminating furnace for use with EVA film, consisting of a heating chamber for a plane or a multi-storey system for increased production.

The glass loading and unloading system works by extracting the plane of an outer rail or through the use of a hydraulic platform for the multi-storey system. An integral part of the system is an oil vacuum pump, connected to the silicone bag, by means of high temperature resistant silicone tubing and related attachments to obtain the vacuum required for the lamination of glass.

Inside the heating chamber, the thermal cycle takes place by means of a hot air convection system which distributes the heat evenly throughout the chamber and across the surface of the glass.

The Fox series is designed to satisfy the demands of small- to medium-sized glassworks interested in integrating a compact tempering plant but are limited by available space. The Fox series maintains high quality standards while remaining affordable.

COMPANY PROFILE

Products

OCS machines are well-known the world over for their reliability and safety. As of today, more than 5,000 machines have been installed in over 50 countries.

Cutting

The sector dedicated to cutting tables is one of the main sectors of OCS and in which it has invested considerably. The company's cutting tables are available in diverse types of customization, with either belt or rack and pinion transmission. The high quality of the components used and the attention to detail are the strong points of OCS' tables. OCS offers its clients high-performance cutting tables for float glass with an extensive series of optional equipment.

Handling

With regards to machinery for the lifting and handling of glass, OCS offers: tongs, suction cups, manipulators, jib cranes, automatic loaders and unloaders, unloaders for packed glass. Suction cup equipment from OCS includes diverse models and optional equipment to satisfy each and every need with regards to lifting of glass. Particular attention has been paid to the safety and ease of use for outdoor applications with, in fact, OCS rechargeable suction cup devices having considerable success.

Jib cranes and manipulators from OCS are, on the other hand, fundamental equipment, used to load and unload glass from cutting tables, IG lines, straight line edgers, etc. OCS automatic loaders and unloaders are an important part

of machinery for medium- to large glassworks with strong demands for automation. These machines can be used with cutting lines, bilateral edgers, etc.

Storage systems

Glass storage systems are essential for glassworks to organize production efficiently and to optimize available space in the glassworks. In this sector, OCS is a leader, with highly reliable solutions for the needs of its clients.

CLV is a manual storage system with extractable racks. It is available for both glass sheets and packs of glass with maximum sizes of 3,210 x 2,600mm.

The storage system has double rails to ensure the smoothest flow even with high glass loads. CLO is a sideways-moving storage system available in manual, semi-automatic and full-automatic versions.

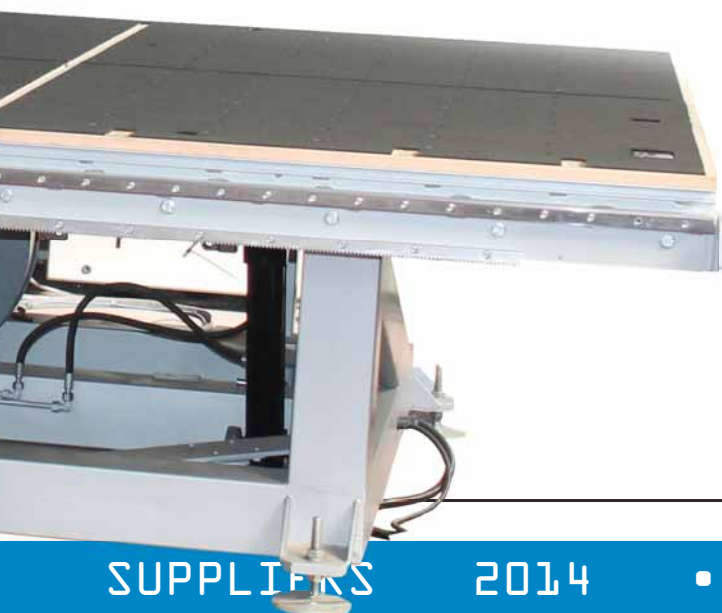

Washing

OCS' horizontal and vertical washers have been developed to offer high-quality and high-performing machines, and for clients needing affordable and quality machinery.

The company's washing machines can be equipped with from 2 to 6 brushes, and are made entirely of stainless steel.

Sandblasters

OCS also offers manual and semi-automatic sandblasting machines with ease-of-use, as well as completely automatic PLC machines.

COMPANY PROFILE

ERP System

High-tech software system for the input of orders, shipping documents and invoices, warehouse management, production planning, batch creation, cutting optimization, production running by means of barcodes.

Opty-Way Enterprise is **Optima's** network-integrated software solution able to manage all the needs and problems of glassworks. Developed using SQL Database, it enables to input and plan any type of production order thanks to the use of a powerful and flexible distinct base.

Monitoring

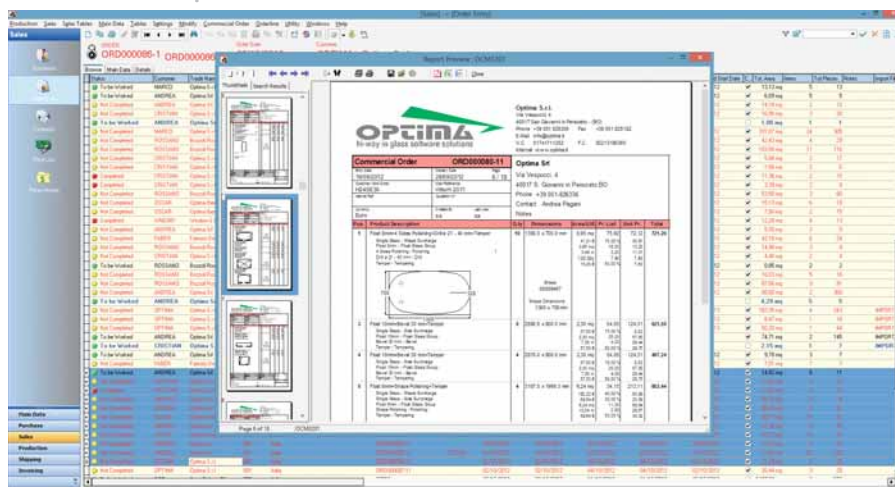

Specific production modules for visualization of each and every phase of production, data regarding the items being produced, orders and batches, supervisors for production running using barcodes, as well as the recording of production times, visualization of cutting diagrams, organization of racks and shipping all visualized on monitors.

Optimization Tools

High-yield systems for the optimization of waste product, suitable for straight-line- (1D), guillotine- (2D) or nesting cutting of complex geometric shapes. With more than 25 years of development and over 8,000 installations all over the world, Opty-Way and Nest-Way are the most widespread used optimization systems used for the glass sector.

The crown jewel of the single edge blade market is the Personna GEM® 3-Facet Single Edge blade. Personna 3-Facet GEM blade outperforms 2-Facet blades by at least 20% in durability and sharpness. Personna 3-Facet blades are used to maximize scratch reduction, and are available oiled or washed, depending on your specific application. Personna's proprietary grinding process creates the sharpest blade available, Personna 3-Facet blades give users a super sharp blade with excellent durability for increased productivity and performance.

COMPANY PROFILE

For over 135 years, **Personna®** has been the leading industrial and specialty blade manufacturer in the world. Long known for making some of the most durable, sharpest and highest quality blades available, Personna, based in Verona, Virginia, US, delivers products that the end user and professionals demand.

Personna chooses only the highest grades of stainless and carbon steels for processing applications. Personna understands the critical nature of glass processing, that waste reduction is critical and high scratch rates are not an option. The company believes that end users choose Personna blades when it matters, when the cost of failure is high, and when performance is critical. Personna's ongoing product development will bring maximum performance and durability in every blade they make.

Personna 2 and 3-Facet single edge blades are the industry standard for Glass Processing. Their unique blades come in a variety of materials, thicknesses and packaging options to suit all types of processing needs. All Personna blades are configured to minimize the hazard of chipping, scratching and damaging glass.

While the Personna Carbon Single Edge blades are the best in the business, you do have choices, depending on the application. Ever thought of stainless? The advantages of stainless are: a slightly softer material that will "give" slightly when the edge comes in contact with something solid on the surface. When that happens, stainless tends to give more, instead of chipping or scratching glass.

Personna 2-Facet single edge blades are an excellent choice for processing operations. Personna's Duro Edge provides a great balance of sharpness and durability, and they are available in .009 & .012" high carbon steel and aluminum backing. The 2-Facet blade is used primarily for scraping applications like paint removal, removal of tape, adhesives and other materials from hard surfaces. The 2-Facet blade is also used for cutting and trimming non-critical materials like paper, plastics, and film.

Personna offers glass installers some of the finest utility blades made. Using the highest quality materials and using a precision grinding process, Personna heavy duty utility blades deliver the cutting performance you demand. Standard 2-notch pattern for universal fit.

Personna delivers what glass processors demand: blade edges with the perfect balance of sharpness and durability, packaging options for a variety of end users, and tools developed with the end user in mind.

When blade performance, product safety, and user productivity matters: reach for Personna.

COMPANY PROFILE

R.B.M. ITALIA s.r.l. has been manufacturing polishing wheels for flat glass for over 50 years.

Its extensive product range includes 26 different formulations of wheels with different grit and size, commercialized by a detailed global sales network.

The family-owned and managed company has always been located in Baldichieri, in the province of Asti, where the company was founded in 1963, thanks to the inventive of Romano Reynaud, who was the first person in the world to create the formulation of polishing wheels and their use on flat glass processing machines.

The Reynaud continues these activities with seriousness and success, following the philosophy of technological research and great skills and competence in the sector.

Today, R.B.M. not only means high-quality products, used in small workshops as well as in large-scale industrial production, but is also a prestigious trademark.

Alongside the production and commercialization of its own polishing wheels, R.B.M. has also been able, year after year, to increase its national and international markets thanks to the continuous development of new products, taking part in the most important fairs of the sector, cooperation with machinery manufacturers, as well as tailor-made technical assistance for the diverse needs of clients and markets.

COMPANY PROFILE

R.C.N. Engineering Srl was founded thanks to the idea of its two founders after many years of experience in the glass industry and, more specifically, in fusion technology.

R.C.N. was the first company to promote innovative technology for the production of glass washbasins in the 1990s, absolutely perfect in shape and transparency.

This system, with its use and control of three temperatures, then led to the study and feasibility of innovative ideas.

Since then R.C.N. has continued to develop and renew itself thanks to the goal of innovation that it is characterized by.

POWERLAM

Absolutely innovative technology in lamination.

Reduced production and logistics times thanks to a system that does not need bags, and with fast heating of the laminating chamber. Wide range of machine sizes and combinations for only EVA processing or also for EVA and PVB.

This machine requires continuous production in order to optimize production volumes and speed.

Ease of loading and unloading operations thanks to two conveyors equipped with lifting device for the movement of the glass. A highly versatile machine that enables to change production type without the need for specialized operators.

REVA FILM

At long last a laminating film made in Europe that respects the double needs of adhesion and transparency, totally compliant with European norms. A material that is always new and available as stock. R.C.N. has dedicated a specially equipped area of its premises to the storage and transport of rolls of REVA FILM. The film is available in different thicknesses and sizes and responds to diverse manufacturing needs. The production of coloured REVA FILM is presently being studied.

ACCURAX 2070

Laser technology for glass engraving for decorative purposes. This machine, which made its official debut at glasstec in 2012, has already gained success, above all for its vertical processing, which enables glassworks to optimize space with a high-performance, low consumption machine, and exclusive-designed finished products.

High-speed operations – 1 metre per second – with extreme precision on glass and any other type of material on areas and sizes of up to 2,700 X 2,000mm.

SILIKOSOFT

Bags for glass lamination designed by R.C.N. with special closure that enables fast handling and highly-resistant airtightness. Both strong and flexible, it can be used for the lamination of large glass thicknesses and curved glass sheets. Guaranteed for at least 4,000 hours of use in correct conditions.

Can be repaired directly by the client in the case of breakage. The use of these bags in an autoclave is highly requested, also in vertical format with reinforced base.

Accurax 2720

Laser technology for glass engraving for decorative purposes

Cooling and humidity control units for the storage of EVA and PVB film

Accessories for lamination and production control

PRODUCT RANGE

Smart and Lammy

Laminating furnaces with simple or modular bag system

Powerlam

Continuous laminating furnaces without bag

ECO

Fusion, bending and special bending furnaces

COMPANY PROFILE

Rollmac is the division of GeMaTa Spa, one of the leaders among leather finishing equipment manufacturers, devoted to the production of machinery for the enamelling of float glass sheets. Thanks to experience acquired, it has developed a new system based on engraved roller technology in continuous operations, also launching drying compartments. Rollmac manufactures a wide range of machinery and lines for the glazing and decoration of flat glass for the most diverse requirements.

Production

Gemata/Rollmac technology includes enamelling machines Multiglass, Colorglass, drying tunnel Glassdrier which al-

lows easy working systems, perfect application homogeneity and drying performance on sheets with minimum dimensions up to very large ones and the possibility to apply both traditional ceramic and organic as well as silicon paints.

Multiglass and Colorglass can both be used as stand-alone units in automatic glazing lines, as well as equipped with a Glassdrier IR and conveyor rollers, if required.

Last but not least is Glassline, the brand new machine to enamel the edges of float glass sheets by means of a steel engraved cylinder. It is a completely new project based on the well-known technologies of enamelling using a reverse roller.

Rollmac – Gemata is certified as per ISO 9001, ISO 14000, and Italian "Safe Work" standards.

COMPANY PROFILE

Sangalli Technologies

Sangalli Technologies is the technology provider within Sangalli Group, and was created to design and supply melting furnaces, heat recovery systems, as well as to provide technical services. This expertise and knowledge was made available by the Sangalli Group, which specializes in the production of float glass and has, within its portfolio, four production facilities in Italy. Over the last 10 years, more than EUR 300 million has been invested in various production lines of Sangalli Group, with direct management of design, construction, start-up and production set-up.

Sangalli Technologies now provides its customers with a strong knowledge base in all design and production issues, with special regards to project management and construction.

Our services

Our services focus on two areas: glass production and energy efficiency.

Our Services: Glass Production

Our mission is to support our customers and develop long-term relationships. We offer our expertise and support covering basic design through to production, integrating the supply of the furnace with the training of operators at our plants, start-up and set-up of production, long-term assistance and troubleshooting.

Within the glass production sector, Sangalli Technologies predominantly provides the following services:

Feasibility Studies, which include site evaluation, an analysis of float plant size, capital costs, market, raw materials requirements, utilities requirements, operating costs, laboratory and procedures, as well as personnel and organization.

Technical Advisory Services, including preliminary studies, general design, suppliers, orders and construction. We will check and comment on project files. We will highlight weak points and provide alternative strategies and solutions, utilizing both our expe-

rience and existing plants as real and tangible examples. Sangalli Technologies offers turnkey **Melting Furnaces** ranging from production capacities of 300 tons/day to 850 tons/day for both clear and low-iron float glass.

Thanks to our extensive experience in production and processing, we know exactly what the objectives and needs of a float glass producer are. We succeed in a very competitive market that expects high quality glass only with modern and efficient design, as well as continuous improvement of our furnaces.

We constantly study and incorporate 'tailor-made' solutions for our furnaces, tested in real production environments, which are not usually available on the market. We supply our customers the same furnaces we would realize for ourselves. We use advanced tools and best available practices to design refractories, steel structure, piping and equipment, such as 3D solid modelling, structural analysis, thermal and stress calculation (FEM), heat balances, Mathematical Modelling (CFD), prototypes, and material testing. Our design, coupled with the right selection of raw materials and operation procedures, leads to very low fuel consumption, while maintaining the best quality and the highest production yield.

We also offer a long-term (up to 6 months) **Training Program**, with theoretical lessons and practical activities at our factories at Manfredonia and San Giorgio di Nogaro. Our customers' production engineers will work together with our skilled technicians, gaining all the expertise and best practice necessary for the operation of the float line. Upon request, training can be extended to transformation plants (coating and/or laminating).

We know that furnace performance is dependent upon proper heat-up and start-up; therefore, Sangalli Technologies can provide **Start-Up and Production Assistance** to customers during these key phases with a special team of operators and engineers. If Sangalli supplies the furnace, our team already knows the furnace in detail as well as all its operational param-

eters. Years of experience in float and lamination operations have given Sangalli Group a consolidated knowledge of almost all the problems a float plant or a lamination line can have. We can support our customers in setting up operations and specific problem solving, as well as providing the on-site assistance of our skilled people.

Our Services: Energy Efficiency

Within the sector of energy efficiency, Sangalli Technologies can conduct **Energy Audits**, which represent the correct approach to the subject of energy, as they require precise analysis of the initial situation, in order to identify issues and opportunities for efficiency in the overall use of energy.

Sangalli Technologies has the experience, competence and skilled manpower to carry out such analysis, and, therefore, develop specific **Feasibility Studies** for the potential solutions that can be implemented.

Our expertise stems from the fact that Sangalli Group owns the first Heat Recovery System, based on ORC technology, ever installed in a glass plant in the world. With this plant, a large part of the thermal energy going to the chimney with the exhausted gases is recovered and electrical energy is produced, significantly reducing energy costs.

Thanks to ORC technology and the appropriate overall design, this plant offers unique characteristics in terms of flexibility, stability of operation, and low maintenance requirements. It fits well with industrial needs and, in particular the whole of the glass sector, from low-power installations to very large ones. The ORC systems, started up in June 2010, can be seen at the Sangalli Group Plant in Manfredonia.

Thanks to this experience, Sangalli Technologies is able to offer and realize **Turnkey Solutions** and consultancy on heat recovery systems from 100 kW up to more than 2000 kW.

glasstec - Düsseldorf, Germany
21 / 24 October 2014

COMPANY PROFILE

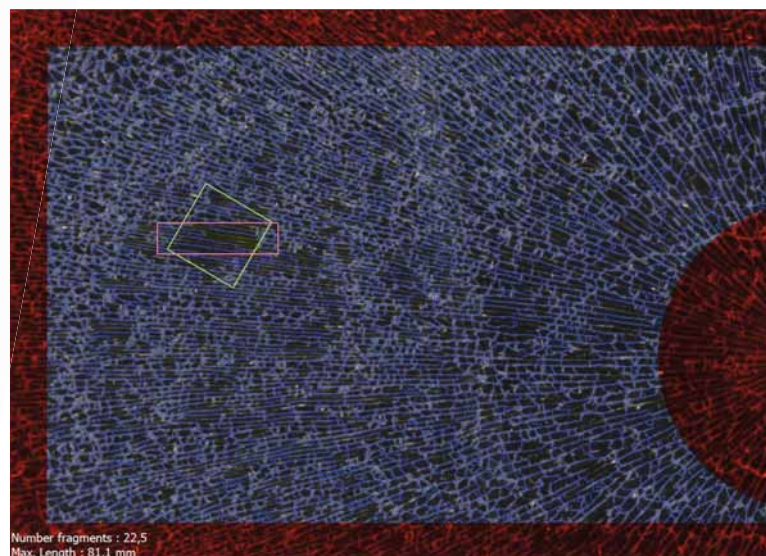

Softeco is the worldwide leading supplier of Quality Control Equipment for the flat glass industry, both architectural and automotive. We closely follow changes in EU regulations and international norms, and update our supply and services accordingly.

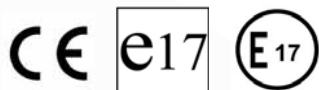

Quality control for automotive glass:

- Softeco provides expertise in all normative and informative tests according to ECE R43.
- We supply all the necessary QC equipment, such as:
 - Dropping towers and supports for test pieces
 - Impact objects
 - Projectors and slides
 - Resistance to radiation test equipment
 - Light transmission measurement
 - Collimator for the automatic double image test
 - etc.
- We can coordinate ECE R, DOT and CCC certification processes.

Quality control for architectural glass:

- We provide knowledge and consultation services for CE marking and tests.
- We supply equipment and machinery to perform obligatory and non-obligatory tests, such as:
 - Spring loaded punch
 - Roller wave gauges and edge lift gauge
 - Optical surface and edge stress measurement equipment
 - Resistance to high temperature test oven

- Insulated glass units' desiccant performance tester
- Low-E emissivity tester
- etc.

Gains through quality:

Some of the quality control equipment we provide can also be used to optimise productions parameters: avoiding waste and increasing yield.

Non-destructive and automated tests:

We aim at developing automated and non-destructive tests, such as the Grazing angle surface polarimeter, GASP, designed to evaluate the strength of the compressive layer, can be used instead of the 4-point-bender machine for the mechanical strength tests. An example of an automated test is the FragGlass software, used in the mandatory fragmentation test for heat-treated glass.

Other control tools:

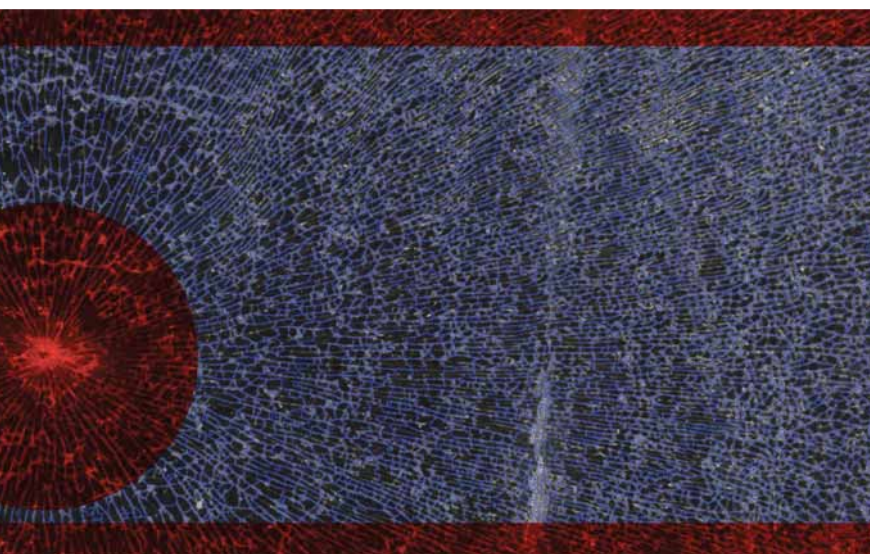

In addition to all mandatory QC instruments, we also provide instruments for daily or random testing, such as:

- Coating detection for IGU glass
- Tin-side detector
- PVB humidity meter, etc.

PRODUCT RANGE

- QC equipment for tempered and laminated glass
- Complete range of quality control equipment for automotive safety glass
- QC plans and information for architectural and laminated building glass
- QC plans and information for automotive safety glass production
- ECE R 43 and DOT ANSI Z 26.1 approval services
- Testing services for safety glass according to different norms, including EN
- PVB shaping, relaxation and cutting machinery

COMPANY PROFILE

Glass cutting without secrets for cutting tools specialist Talamoni.

TALAMONI S.N.C. is specialized in the manufacture of tools in hard metal for the glass and ceramics industry, and has been present on the market since 1994.

Skill, quality, flexibility and service and the strong points of Talamoni

The know how of the owner of the company, together with its young, dynamic staff and passion and motivation, have enabled the company to grow and become established on the market. Today, Talamoni is, for numerous companies, a reliable and proactive partner, with exports making up 50% of its turnover.

Raw material and processes – quality as a standard

Talamoni's cutting wheels and disks, sintered with the latest generation technologies, are made of fine, extra fine and ultra fine micro-grain, and are manufactured using machines that guarantee constant and high quality production quantities. In the company's control department, the physical characteristics of the raw materials are examined, along with the metallurgical properties and all production phases up to the finished products, prior to being assembled in the various tool holders, also manufactured by Talamoni.

Hollow glass processing

The hard metal cutting wheels for use with the home accessories sector, are manufactured in different sizes and levels, other than the wheel holders made to order for manufacturers

of cutting lines. Talamoni also manufactures a series of diamond tools for the finishing of edges and drinking glasses.

Flat glass processing cutting wheel

- Hard metal cutting wheels with diameters of 3 to 12.4mm for automatic and semi-automatic cutting tables, available with angles of from 90° to 165° to cut monolithic, laminated, stratified and special glass types.
- Wheel holders in plastic with cutting wheels made in different sizes suitable for cutting tables from Bystronic, Bottero, Bavelloni, Cms, Csm, Euromec, Hegla, Intermac, Lisec, Gfp Meccanica, Macotec, OCS, Tuomas...
- Wheel holders in metal or stainless steel in different models for all types of cutting tables, CN machines and cutters on the market.
- Modules in metal with wheels for fast and safe wheel changeover.

New product

DIAMANT – the most recent product from Talamoni- Diamant cutting wheels are made in all sizes with different surface finishing as per the type of glass to be cut. The use of Diamant wheels are really advantageous: higher cutting quality, easy breakout of the glass, triple working life, same cutting angle, thus enabling to process higher thicknesses.

Lubrication

Talamoni cutting fluids are formulated to ensure ideal cutting lubrication and the optimization of the long working life of the cutting wheels; the oil enters the cut, maintains the tension of the glass and facilitates the opening of the cut.

Talamoni supplies four different types of synthetic fluid for glass cutting:

- T-OIL 3125 for high glass thicknesses - low volatility
- T-OIL 3130 for shaped cutting – medium volatility
- T-OIL 3133 for monolithic glass – high volatility
- T-OIL 3232 for magnetron, stratified, coated glass, etc. – super volatility.

Manual cutting

The company has a complete line of oil-based glasscutters for manual cutting.

Glasscutters with plastic or anodized aluminium handles, transparent or blue – Made in Italy.

Talamoni glasscutters are manufactured with different cutting angles in response to different cutting needs and demands, for professional use in glassworks, as well as for artistic glassmakers.

COMPANY PROFILE

Autoclave treatment is the final phase of lamination. Each glass "sandwich" exiting from the roller press of the Lamination line is placed onto the trolley, separated by suitable material and loaded into the Autoclave.

The Autoclave is the only machine that combines the action of pressure, temperature and vacuum to ensure perfect bonding of the glass with the polymer interlayer, along with high transparency and resistance.

The Autoclave business unit, whose core business is the fabrication of autoclaves for the glass industry on worldwide basis, actually provides clients with the advantage of having access to a comprehensive engineering group involved in all various phases of plant realization such as:

- process engineering, detailed design, manufacture and supply of equipment;
- project management;
- erection, commissioning and training of personnel (completely managed by TF group or under TF group supervision only);

- after sales services and scheduled maintenance to TF group autoclaves;
- revamping and maintenance of autoclaves, also those not manufactured by TF Group.

TERRUZZI AUTOCLAVES with "PATENTED" fast door locking system for autoclaves consists of three forged rings. The shell and the door rings are clamped up together by the external ring made into sectors to allow the perfectly tight closing of the system. The management of the system is automatic, pneumatic and hydraulically designed.

The maximum load in the autoclave, thermal gradients, temperature and pressure are the parameters used to calculate the exchanger size and surface of the battery, the motor fan and the regulating valves to perform the laminating cycle. Heating media may be electricity or thermal oil while cooling is water treated. The pressurizing media is dried and oil free compressed air. The autoclave may be equipped by one- or two doors according to the manufacturing method.

The power & control cabinet are designed and manufactured "in house" by the TERRUZZI Automation Dept in accordance with the regulations of the final destination country.

The control processing software is user friendly, highly flexible, can fit each and every specific customer demands and is compatible with all the hardware on the market.

Last but not least, TERRUZZI provides remote assistance on demand to support End-users during autoclave use.

PRODUCT RANGE

- Screen printing lines for automotive, home appliance and architectural flat glass.
- Automatic and semiautomatic screen printing machines, logo printers and roller coating machines.
- IR and UV drying ovens. Pit free accumulators. Visual inspection stations.
- Robotized loading and unloading systems. Pairing stations. Washing machines.
- Palletizing and handling equipment. Turnkey plants for flat glass.
- Equipment for screen preparation.

COMPANY PROFILE

WINDO MACHINERY is a worldwide-known manufacturer of screen printing and handling equipment. Founded in 1997, today it is the preferential supplier of all the biggest manufacturers of flat glass for the automotive, architectural and home appliance fields. WINDO is able to supply screen printing machines and complete lines that meet the requirements of all the market segments (with semi-automatic to fully automatic printers) in the various manufacturing domains (household appliance, architectural and automotive glass).

The great experience in the field of screen printing equipment allows WINDO to be a partner not only for the supply of state-of-the-art equipment, but also for the technical and technological support about the screen printing process that it can provide to its customers. Its profound knowledge of this process can be useful both for those companies that are just starting their activity in the flat glass sector and for those manufacturers whose productivity is often affected by groundless commonplaces.

After years of hard efforts, WINDO has become China's leading enterprise in this field, especially in automotive glass printing field, our domestic market share has come up to more than 85%; furthermore, we had built up a long-term and good strategic business partnership with many international well-known enterprises, such as: SAINT-GOBAIN, AGC, PILKINGTON, etc.

In order to serve the new and old customers from all over the world better, WINDO has been always acting on the concept of "Service Supreme", and had set about the construction of sales and after-sale service network vigorously.

WINDO selected the powerful sales and service companies to act as our agent for the sales and after-service of the production of our company in key areas, to resolve actual difficulties of customers, such as long distance and difficulties in service. The cooperation with EXA, that will be also the exclusive agent of WINDO in Europe, will grant to European customers high level after sales service with its skilled personnel - all technicians with more than 10 years' experience in glass printing equipment.

A & B Glass

Request a Quote

Welcome to A&B Glass Company Ltd

With over 30 years of trading A & B Glass are recognised as an award winning manufacturer of PVC-U Windows, Doors and Conservatories and are proud to be one of the industries leading companies at the forefront of product innovation.

A&B Glass 90,000 sq ft site in Sudbury

A & B Glass are equally proud of the growing network of Approved Tricept installers who are based at various locations throughout the UK. This network continues to grow alongside the reputation that our Tricept product range of windows, doors and conservatories has established.

The continued growth of A&B Glass has included the acquisition of other equally well known companies within the industry, resulting in the formation of the A&B Glass Group. For more information about the Group please click here.

With dedicated divisions for each sector the A&B Glass Group supplies PVC-u products across Retail, Trade, New Build and Commercial markets.

We hope you enjoy browsing our website.

For a brighter future
Tricept™

SUBSCRIBE NOW TO THE WORLD'S

GLASS MAGAZINES

since 1989

Glass-Technology International

GLASS-TECHNOLOGY INTERNATIONAL is the leading international magazine for professionals involved in the flat and bent glass industry, from building to automotive, and from furniture to household appliances. **G-TI** is useful for those working in float glass plants as well as glass processors/fabricators, glazing contractors, automotive glass installers, window and door manufacturers, glass merchants, wholesalers, etc. With about 100 pages per issue, it is the bi-monthly tool for keeping abreast of new technology, new products, company life and all innovations in the world of flat and bent glass.

Also available in interactive digital format.

since 1988

glassmachinery world plants&accessories

GLASS MACHINERY PLANTS & ACCESSORIES is the leading international magazine for glass manufacturing, and is targeted at glassworks involved in the production and processing of hollowware and special glass (bottles, containers, household, lighting, technical, scientific, industrial and medical glassware).

GLASS MACHINERY PLANTS & ACCESSORIES is a bi-monthly periodical with about 100 pages of product news, current world news, focus on..., technical articles and dossiers, worldwide exhibitions, glassworks in the world, Yellow Pages, etc.

Also available in interactive digital format.

since 1990

WORLD GLASS DIRECTORY

The **WORLD GLASS DIRECTORY** is a unique international annual guide which gives a complete overview of international glassworks and suppliers involved in hollowware and special glass manufacturing. About 200 pages of complete company profiles: addresses, management, sister companies, plants, number of employees, turnover, banks, year of company foundation, capital, trademarks, areas of activity, innovations, product-by-product and country-by-country breakdowns. **The WORLD GLASS DIRECTORY** is the annual reference point for the international glass manufacturing industry comprising bottles and containers, domestic glassware, tubing, vials and ampoules, lighting glassware, technical and industrial glassware, scientific, laboratory and medical glassware and automotive glassware.

Also available in interactive digital format.

first edition

FLATGLASS 2014 world directory

The **FLAT GLASS WORLD DIRECTORY** is a unique international annual guide providing a complete overview of glassworks and suppliers for the flat glass sector. More than 150 pages of company profiles and information about worldwide glassmakers, glass processors and suppliers, including addresses, management, sister companies, plants, number of employees, turnover, banks, year of company foundation, capital, trademarks, areas of activity, innovations, sales network, exhibitions, and, of course, interactivity in digital format, make the **FLAT GLASS WORLD DIRECTORY** the annual reference point for the international flat glass industry.

Also available in interactive digital format.

Solutions to excellence.

Complete range of solutions for laminated glass cutting

The **Genius LM-A** range of cutting lines consists of machines for cutting laminated glass that are ergonomic and equipped with intuitive controls, which bear witness to Intermac's great know-how in the sector and can guarantee high levels of productivity. The **Genius LM-AC** lines are available with full cycle automation facility from loading to unloading of the finished product and are aimed at companies with needs above 400 m² per work shift. **They represent particularly innovating solutions, covered by Intermac patent, which allow insertion of a laminated line that can withstand comparison with other models on the market but in much reduced space and without renouncing output levels, given the very short working cycle times.** Glass sheet handling is completely automated and the operator only needs to unload the finished products.

MHS Multizone Heating System
"Togheter we win"

ATS EcoConvection

MHS: Multizone heating system

This heating system with small heating elements to achieve a homogeneous glass heating and is particularly suitable for Low E glass. In the heating chamber, there are several heating zones, each one controlled by the computer through thermocouples. These detailed zones allow a high precision heating and a great flexibility for adaptation to different shapes of glass.
