

Glass South America 2024 to showcase **FOREL's** trendsetting solutions

With its ongoing focus on quality and sustainability, FOREL continues to lead the industry in engineering excellence. Renowned for its pioneering glass machinery, the company will be showcasing its cutting-edge innovations at Glass South America - an event that already has the sales team all set to highlight Forel's advancements in insulated glass unit lines, spacer technology and vertical machinery.

For nearly 50 years Forel has built state of the art machinery for the flat glass industry and has grown a worldwide reputation for delivering automation through innovation. With worldwide trade show attendance and brand representation still an essential priority,

the company is proud to exhibit once again at this year's edition of Glass South America. Here its commercial team will be present to meet and greet new and existing customers alongside Forel's established network as it presents the very latest in machinery development from the range. Its entire range

will be presented with walk-through explanations that detail the added value Forel brings in precise quality, performance and reliability.

WELL-PRIMED FOR TOP SERVICE

Amongst others, the sales team will show Forel's latest develop-

ments on the High Tech Insulated Glass Unit Lines with integrated application of flexible or thermoplastic spacers but also on the technology for processing all the different types of rigid spacers now present on the market - as well as the recent innovations on the range of glass edge vertical machinery. "We are pleased to con-

firm our participation in Glass South America. It is the most important expo in the entire region and is for us a strategic event to continue our growth path in the South American market,” explains Forel Export Area Manager Giovanni Quarti. “We are highly-convinced that our technology can best respond to the increasingly elevated quality requirements coming from the market - starting from large processors up to forward-looking realities that intend to stand out in their growth trajectory. We are confident that the expo will be an excellent time to share ideas and trends - offering many business opportunities.”

TAKING ENGINEERING TO THE NEXT LEVEL

The drive toward automation through innovation has meant the wholesale development of the entire machinery range from superstructure to component parts to electronics and software which, when combined with Forel design and application, delivers a highly-engineered performance platform. Productivity, accuracy and reliability are all ‘a given’ respecting the brand and its reputation. That said, with new, built-in

efficiencies the drive toward increased sustainability is a key consideration too. Optimised handling is another key feature benefit of Forel automation as is the simple user interface that operators use to supervise equipment performance. All Forel machine modules have self-diagnostic capability, performance reporting and remote support functions on board and all production data can

be recovered by Industry 4.0 software. Connecting to client ERP’s or MES protocols are also possible via the operating interface.

GLASS SOUTH AMERICA

By visiting the Forel team at Glass South America from 12 to 15 June this year, attendees at booth L040 can have more information on the company’s sorting systems, its IGU Lines as well as its world-renowned

Seaming, Processing and Fabrication lines.
