

Continuous growth sees SCHIAVO go from strength to strength

VERTICAL AND HORIZONTAL WASHERS

Washers represent one of our main and best-selling products. Schievo's vertical washers are divided into five models: EASY, TOP,

WD, PLUS and HYDRO respectively. The horizontal washers are characterized by a single model, namely the HTL, which is of the highest quality and performance.

- EASY is the simplest and most economical ma-

A leading name in flat glass near Milan, SCHIAVO has been specializing in machinery for washing, lifting and processing flat glass for over 40 years. Its 100 percent Italian-made products include vertical and horizontal washers, vertical CNC drilling/milling machines, suction cups, manipulators, warehouses and insulated glass units.

HTL1600

chine. The model offers an excellent quality/price ratio. TOP is designed for glass with heights ranging from 1600 to 3300 mm, with a thickness of up to 20 mm. Here the machine features a robust structure made entirely of stainless steel,

which ensures exceptional product quality.

- WD is a washer equipped -using a crank- for thickness adjustment of up to 20 mm. It is available for glass heights of 1600 and 2000 mm.
- PLUS is the top-quality washer designed

HYDRO2600.6

for long-lasting performance. It is available for glass sizes from 1600 to 3300 mm and supports a maximum thickness of 20 mm.

- HYDRO is the flagship model among vertical washers. A robust machine of uncompromising quality, it is designed to be connected in line with other machines and is Industry 4.0 classified. Equipped with remote assistance and machine data exchange the HYDRO is available for glass with heights ranging from 1600 to 3300 mm and will support a thickness of up to 40 mm.
- HTL series washers are designed to guarantee high quality and performance. Extremely reliable with a sturdy structure, these washers provide superior washing quality using optimum technology. They are built to outlast many other similar machines on the market - thanks to careful analysis of functionalities that are meticulous in every detail. They are designed to deliver high washing quality both in-line, when connected to other machines such as bilateral edgers, or as stand-alone machines. Available for glass

widths from 500 to 3300 mm and thicknesses of up to 40 mm. The HTL model, too, is Industry 4.0 classified.

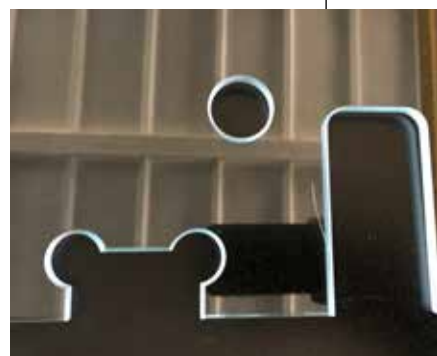

VERTICAL CNC DRILLING/MILLING MACHINE

The FV1000 model, for vertical drilling/milling, is a 4-axis CNC machine. It will allow glass workshops of all kinds to perform any type of engraving, hole and shape that's required to install hinges, locks and all kinds of accessories on both glass doors and furniture glass. Among other possibilities it can create squares, circles, rounded angles, corner cutouts, Mickey Mouse shapes, 'U' shapes and much more. The possibilities are almost infinite with the FV series, which comes with a rich

library of built-in shapes. All shapes can be modified and saved as new. Moreover, ISO or DXF files can be imported into the machine from any computer via LAN or Wi-Fi, or through the USB port using a pen drive.

The 'direct drawing' procedure uses internally-stored shapes that can be easily modified by the operator after inputting the relevant parameters. This operating mode is extremely simple and fast and can be carried out by operators without specific training. The FV1000 is equipped with a pneumatic clamp for automatic glass positioning. With this accessory, the operator only needs to handle the loading and unloading

of the glass. All other operations are handled automatically by the machine, which makes the process much faster. Also here, the FV1000 is classified as an Industry 4.0 machine.
