

Fresh beginnings for **FILTRAGLASS'** New Year of firsts

Here we add to our list Filtraglass' new home following an official move to neo-premises in Vilamallà where, thus freshly-relocated to Girona province, it's now headquartered within Pont del Príncep industrial estate at number 19 Carrer Riu Fluvià. Today the company boasts a space spanning over 1.000 sq m - a significant extension in

comparison to the previous facilities, which also reflects the exponential growth it's experiencing worldwide.

PRIMED ANEW FOR GROWTH

The new premises include a sizable space for the manufacture of water filtration systems, a large stretch where machines all set for shipment to their fi-

For FILTRAGLASS, 2022 saw this New Year true-to-form in every way, with new facilities, new team members - even new R&D projects in line with the company's continuous innovation efforts to improve its products whilst creating new ones.

nal destinations are stored, an area that serves the dual function of meeting space and showroom where Filtraglass machines can be viewed up close by both customers and collaborators, and an office space that comprises, among other units, that of the director as well as those of administration, accounting and communications. Growth the company's experienced of late is further reflected by the expansion of its workforce. Here Filtraglass has added to its ranks a communications team manager in recent months, as well as a new welder, an electrical technician, a mechanical technician and an administrative assistant. Thus, as a lead player in the water filtration industry,

the company expects improvements with this larger and more diversified team in the areas of production, advertising and public relations, customer service and, of course, innovation.

LOOKING AHEAD

Naturally, Filtraglass also ushered the New Year in with some key resolutions. Indeed, the company continues to be committed -as it has been since its founding- to a sustainable glass industry - now more than ever. Faithful as always to its core values and public commitment to the environment, it will continue to strive towards creating increasingly sustainable water filtration systems which will, in turn, accompany its customers and the glass indus-

try at large in the direction of a greener world.

RESEARCH & DEVELOPMENT

A second resolution of Filtraglass is to enlarge its existing international footprint. Here it seeks to reach new markets that can value its commitment to the environment as well as its R&D investments. With current systems in all five continents already, the company has set itself the extra target of expanding its international presence by 20 percent. Finally, Filtraglass plans this year to allocate a substantial part of its resources to R&D department as it perseveres in the development of new products and systems which, in water treatment terms, can

comprehensively meet the needs of the glass industry. This investment is considered essential in focusing the company's preparedness towards adapting to the growing, changing needs of the market. In sum, with such a refreshing start, 2022 looks already set to be a great year - both for Filtraglass and for the glass industry as a whole.
