Super Spacer®, Trusted & Proven Warm Edge Performance for Over 35 years

Since 1989, Super Spacer® has set the Standard for Precision, Energy Efficiency, and Productivity.

As an extruded, thermoset polymer structural silicone spacer with integral desiccants, Super Spacer® retains its flexibility across extreme temperature ranges. It consistently returns to its original cured shape and features a low compression set. The silicone formula offers exceptional resistance to ozone, sunlight, and oxidation, while maintaining outstanding color stability. Whether applied automatically or manually, it is the ideal solution for both flat and complex free-form glazing.

Driving the "Skinny Triple" Revolution

Thin triple insulating glazing, or "Skinny Triples", is a rapidly growing market driven by stricter energy standards and rising environmental awareness. Until now, technical hurdles and high investment costs for new manufacturing technology have hindered widespread adoption. Super Spacer® and Forel are proving that these units are now commercially viable. Following a

strategic update, high-performance insulating glazing can be produced on existing, fully automated, high-speed lines without requiring massive capital expenditure.

A critical advantage is the ability to apply Super Spacer® with surgical precision to the thin center pane. With tolerances of well under one millimeter, the system ensures production quality that gives manufacturers a competitive edge, particularly in the residential renovation sector.

The Latest Trend in the Contract Sector is Grey

The flexible spacer, produced in Germany and the United Kingdom, is popular with architects and clients thanks to its high-end aesthetic. It is increasingly specified by architects in grey to support the desire for maximum transparency in glass facades and 'disappearing' sightlines.

The Super Spacer® T-Spacer™ SG was developed for challenging structural glazing projects. Its special design ensures maximum precision in terms of parallelism and tolerances, particularly for large, multi-pane insulating glass units. The result is a robust system that meets the growing demands of commercial construction while optimally combining aesthetics and functionality.

When Super Spacer® was launched in 1989, it became synonymous with the commercial breakthrough of warm edge spacers. Today, Super Spacer® encompasses much more than just excellent Psi values. Whether it's energy efficiency, indoor comfort, automated production or aesthetics, Super Spacer®, is incredibly versatile and future-proof.

Planned Exhibitions 2026

We value direct contact with our clients, that is why we will try to attend as many trade fairs as possible.

Windoor Facade Expo - Guangzhou, China - 11 / 13 March

Fensterbau Frontale - Nürnberg, Germany - 24 / 27 March

China Glass - Shanghai, China - 7 / 10 April

ZAK World of Facades - Dubai - 23 April

GlassBuild America - Las Vegas, (NV) - USA - 23 / 25 September

Glasstec - Düsseldorf, Germany - 20 / 23 October

Windoor North America - Montreal, Quebec - 5 / 6 November

ZAK World of Facades - Kuala Lumpur - 12 November
