ANNUAL GROUP TURNOVER

approx EUR 500 million

SALES

Domestic: 6% - **International:** 94%

QUALITY CERTIFICATION

ISO 9001 - ISO 14001 - ISO 45001

EMPLOYEES

3500

COMPANY FOUNDED

1952

Marposs is a worldwide leader in precision equipment for measurement, inspection and testing in production environment.

Headquartered in Bentivoglio (Italy), it is present with its sales and service network in 34 countries. Production is based in Italy, as well as in other countries such as China, France, Germany, Japan, Korea, Mexico and the US.

Marposs has been operating in the glass industry for over 25 years, providing products and applications for dimensional and geometric measurement of:

- flat/automotive glass;

- glass packaging (for the food and beverage, pharmaceutical, cosmetic and perfumery sectors).

Marposs' products for glass containers measurement, on sample basis, include:

- flexible automatic (**VISIQUICK**, **ATMOS**, **HYDRA**) and semi-automatic (**VISIQUICK-mini**, **IDSCAN**) systems for glass containers measurement and testing
- components and optical sensors

VISIQUICK is a fully flexible and modular gauging machine, including one or more stations for measuring:

- external dimensions on body, neck and finish with cameras;
- weight;
- push-up;
- bore diameter and internal profile;
- wall-thickness;
- labelling area profile (sinks and bulges)

VISIQUICK is available both in standalone configuration, with single or multi conveying systems, or for integration in the production lines for sample checking.

VISIQUICK-mini is a camera-based compact semi-automatic gauging bench for external dimensions measurement.

It can be used in the Quality Control Laboratory or close to the manufacturing

line, where it can profitably replace all go and no-go gauges for external dimensions control. It can also be equipped with an optional scale for weight measurement.

IDSCAN is a semi-automatic gauging bench for bore diameter and internal profile measurement, available in two versions for the

cold-end (**IDSCAN CE**) and for the hot-end (**IDSCAN HE**).

ATMOS is a flexible machine for measuring brimful internal volume of glass containers, without using water. It is particularly suitable for perfumery and cosmetic containers.

HYDRA is a combined machine for burst test and/or brimful and fill-point internal volume measurement of glass containers. It can be installed downstream VisiQuick or in standalone configuration.

More information on Marposs solutions for glass packaging are available on the Marposs website:

Hydra

Product Range

- **CONTROL & AUTOMATION SYSTEMS**
- **INSPECTION MACHINES: COLD-END**
- **INSPECTION MACHINES: HOT-END**
- **INSPECTION MACHINES: VIALS & AMPOULES**
- **LABORATORY TESTING & MEASUREMENT EQUIPMENT**
- **MEASUREMENT & CONTROL SYSTEMS**
