

Trailblazing SGD PHARMA changes the game for supply chains

A global market leader in primary packaging solutions for pharmaceutical glass, SGD PHARMA will be at DCAT Week 2025 among the key drivers of an industry revamp for today's manufacturing. To that end, the company makes multi-million-figure investments in next-generation solutions - all powered by a robust commitment to strengthen pharma supply chains throughout the US and beyond.

D RIVING SUSTAINABILITY AND EXCELLENCE

Poised this year from 17 to 20 to provide a powerful platform for high-level discussions, networking and collaboration with key industry leaders, DCAT Week continues to be one of today's most influential gatherings for pharmaceutical and biotech companies hailing from across the world. Having committed multi-million-euro investments in recent years to modernize its global manufacturing sites, SGD Pharma will be there once again to show how it has strengthened its high-precision vial production to meet growing pharma demand in the US and upgraded its furnaces to reduce carbon emissions and energy use. The company has been recognized by EcoVadis with a platinum medal for 2024 - positioning it in the top 1 percent of the glass industry (and all companies evaluated) and the company's decarbonization targets have been validated by the Science Based Targets initiative (SBTi), marking an important milestone in the company's decarbonization journey.

SHOWCASING INNOVATION AND NEXT-GENERATION PACKAGING

Both Fabio Invernizzi, General Manager BU West and Carole Grassi Mircich, Chief Commercial Marketing & Innovation Officer will be attending to support SGD Pharma's US team in strategic discussions. SGD Pharma is excited to reconnect with its valued customers and is eager to dive deep into understanding their evolving needs. It will also showcase its cutting-edge innovations and explore new opportunities for collaboration that will drive the future of the glass industry.

SGD Pharma continues to drive innovation in pharmaceutical packaging with significant investments and advancements. As proof of our commitment to continuing investment into the quality of our products, SGD Pharma opened a new siliconization operation at its Saint-Quentin Lamotte (SQLM) plant to provide customers with Sealian glass treatment which provides a protective barrier for sensitive, aggressive, and viscous drug products across all administration routes. Additionally, its IDENCY

Type I glass vials offer increased chemical durability for parenteral drugs while maintaining compatibility with standard fill & finish processes for improved efficiency. To accelerate market delivery, SGD Pharma has expanded its Sterinity EZ-fill® ready-to-use (RTU) vial offerings, reducing operational complexities and costs for pharma companies. Further optimizing production, Velocity® Vials -developed with Corning- feature a friction-reducing outer coating - improving manufacturing efficiency by up to 50 percent and minimizing disruptions. Through these advancements, the company reinforces its commitment to innovation - ensuring high-quality, efficient and reliable packaging solutions for the evolving pharmaceutical industry.

SHAPING THE FUTURE OF PHARMA PARTNERSHIPS

With increasing regulatory demands and growing expectations for eco-conscious production, SGD Pharma continues to be committed to delivering pharmaceutical glass packaging solu-

tions that enhance drug safety and efficiency in the US - all while setting industry benchmarks in sustainability. At DCAT week, the team will engage with existing partners, customers and industry stakeholders as well as forge new partnerships to explore how the company can continue to create meaningful, impactful solutions to address the most pressing challenges faced by the pharmaceutical industry in the US. ■
