PATENTED APUS DRY ARRISING MACHINE

COMPANY PROFILE

This steady growth has been supported by the entry of the second generation, who have continued the family tradition while bringing new technical expertise and an international vision.

ITECH's offerings cover the entire insulating glass production process with reliable, 100% "Made in Italy" solutions that are highly customizable. Among the most representative products are the dry arrising machine **APUS**, the **TAURO Series** with glass washing machine, press, and sealing robot, as well as a wide range of complementary machines, including butyl extruders, two-blade spacer cutting machines.

The strength of **ITECH** lies in its fully customer-oriented approach, which goes beyond simply supplying machinery. Consultations, operational training, and fast, efficient after-sales support — both remotely and on-site — ensure that glassworks are always assisted with care and professionalism.

Guided by a vision that sees glass as a key material for a sustainable future, **ITECH** continues to invest in innovation, high performance, and environmental responsibility, building lasting relationships based on trust and tangible results.

Itech Srl, **winner** of the "**Best Tech Award**" at **Vitrum 2025**, with its **innovative two-blades spacer cutting machine**.

Born from a passion for glass-applied technology, **ITECH Srl** has its roots in 1991, when Mr. Andretta and Mrs. Panizzon started a business specialized in electrical systems and control panels. In 2001, **ITECH** was established as a company entirely dedicated to the design and production of custom machinery for insulating glass. Since then, the company has designed and built over 625 machines, now exported to 33 countries, becoming a trusted partner for glassworks in Italy and worldwide.

APUS Dry Arrising Machine

ITECH's patented APUS dry arrising system offers an innovative, water-free solution for processing all types of glass.

IG Production Line TAURO

Fully automated production of double, triple, shaped, and structural glass with integrated gas filling system.

Two-Blade Spacer Cutting Machine

Winner of the Best Tech Awards at Vitrum 2025, it is an all-in-one solution for cutting spacers of all materials.

TAURO Electromechanical Press

Delivers full automation, high-efficiency gas filling, and maximum precision processing glass up to 4 m in length and ≥ 80 mm in thickness.
